

Roadmaps

Vertex Visibility Graph

Full visibility graph

Reduced visibility graph, i.e., not including segments that extend into obstacles on either side.

(but keeping endpoints' roads)

what else might we do ?

An alternative roadmap

Voronoi diagrams

These line segments make up the **Voronoi diagram** for the four points shown here.

Solves the “Post Office Problem”

Voronoi diagrams

These line segments make up the **Voronoi diagram** for the four points shown here.

Solves the “Post Office Problem”

or, perhaps, more important problems...

Voronoi diagrams

“true” Voronoi diagram
(isolates a set of points)

generalized Voronoi diagram

What is it?

Voronoi diagrams

Let B = the boundary of C_{free} .

Let \mathbf{q} be a point in C_{free} . (\bullet)

Voronoi diagrams

Let B = the boundary of C_{free} .

Let q be a point in C_{free} .

Define *clearance*(q) = $\min \{ |q - p| \}$, for all $p \in B$

Voronoi diagrams

Let B = the boundary of C_{free} .

Let q be a point in C_{free} .

Define *clearance*(q) = $\min \{ |q - p| \}$, for all $p \in B$

Define *near*(q) = $\{ p \in B \text{ such that } |q - p| = \textit{clearance}(q) \}$

Voronoi diagrams

Evaluation

- + maximizes distance from obstacles
- + reduces to graph search
- + can be used in higher-dimensions
- nonoptimal
- real diagrams tend to be noisy

Let B = the boundary of C_{free} .

Let q be a point in C_{free} .

Define *clearance*(q) = $\min \{ |q - p| \}$, for all $p \in B$

Define *near*(q) = $\{ p \in B \text{ such that } |q - p| = \textit{clearance}(q) \}$

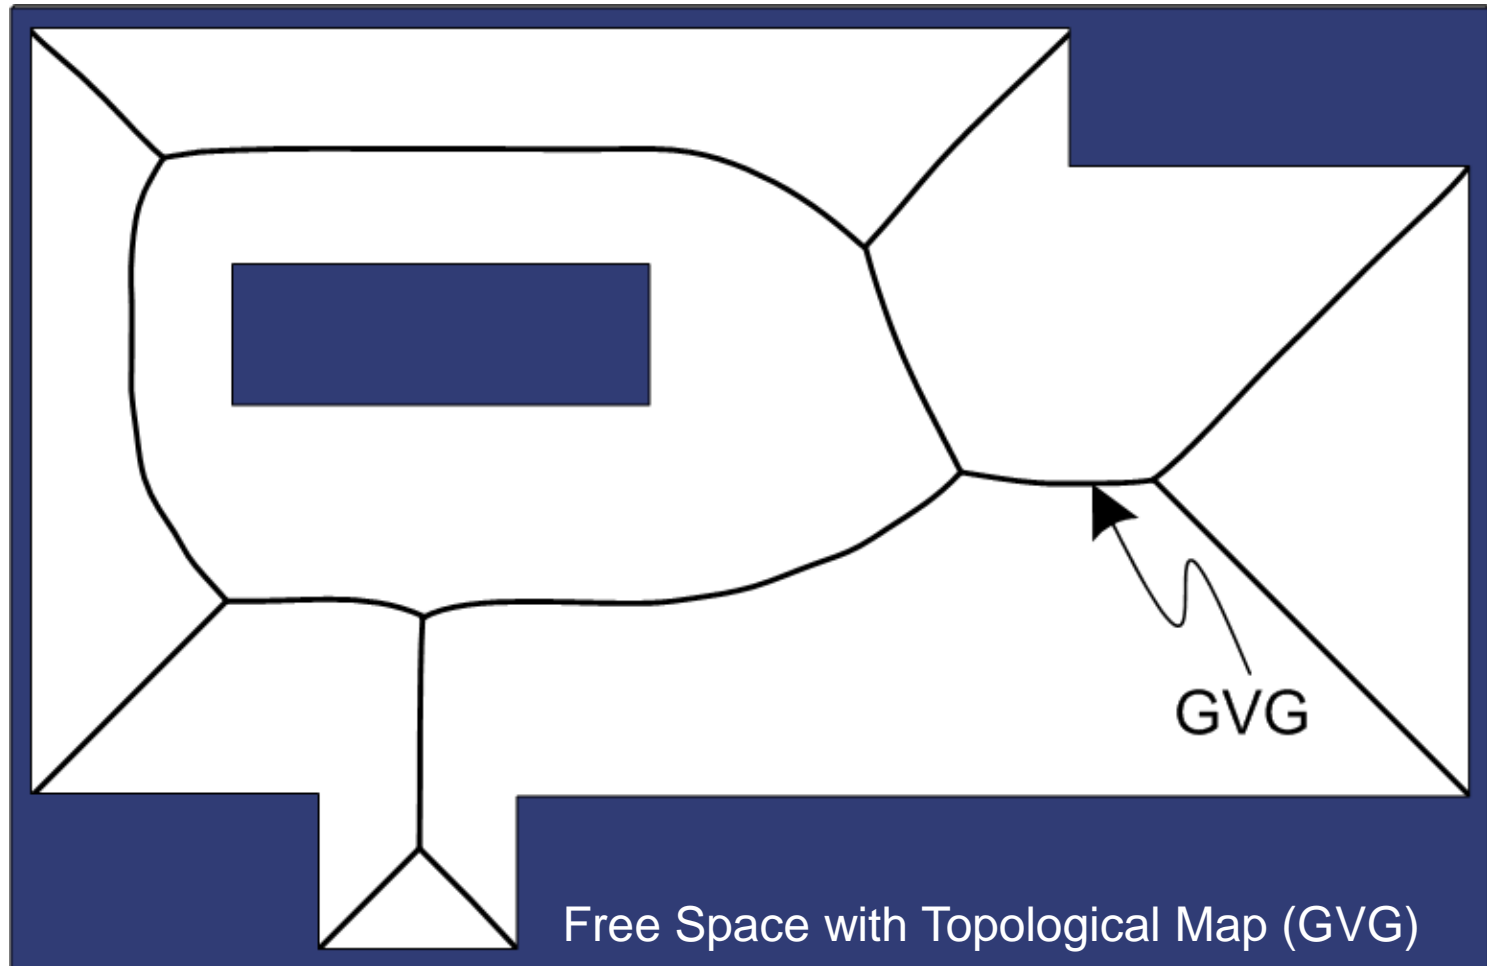

q is in the *Voronoi diagram* of C_{free} if $| \textit{near}(q) | > 1$

number of
set elements

Generalized Voronoi Graph (GVG)

Generalized Voronoi Graph (GVG)

Generalized Voronoi Graph (GVG)

- Access GVG

Generalized Voronoi Graph (GVG)

- Access GVG
- Follow Edge

Generalized Voronoi Graph (GVG)

- Access GVG

- Select Edge

GVG construction using sonar

- Nomadic Scout
- Sonar (GVG navigation)
- Camera with omni-directional mirror (feature detection)
- Onboard 1.2 GHz processor

GVG construction using sonar

GVG construction using sonar

Slammer in Action

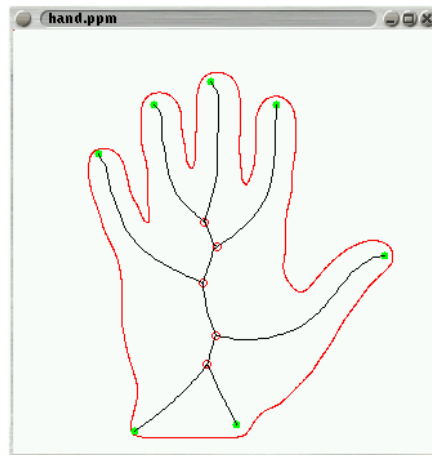

Voronoi applications

A retraction of a 3d object
== “*medial surface*”

what?

Skeletonizations resulting from
constant-speed curve evolution

in 2d, it's called
a *medial axis*

skeleton \longleftrightarrow shape

curve evolution

where wavefronts collide

centers of maximal disks

again reduces a 2d (or higher) problem to a question about graphs...

skeleton \leftrightarrow shape

curve evolution

where wavefronts collide

centers of maximal disks

again reduces a 2d (or higher) problem to a question about graphs...

graph matching

Problems

The skeleton is sensitive to small changes in the object's boundary.

- graph isomorphism (and lots of other graph questions) : NP-complete

Roadmap problems

If an obstacle decides to roll away... (or wasn't there to begin with)

recomputing in less than $O(N^2)$ time?

Path Planning

Potential Field methods

- compute a repulsive force away from obstacles

Local techniques

Potential Field methods

- compute a repulsive force away from obstacles
- compute an attractive force toward the goal

Local techniques

Potential Field methods

- compute a repulsive force away from obstacles
 - compute an attractive force toward the goal
- let the sum of the forces control the robot

key advantages?

Local techniques

Potential Field methods

- compute a repulsive force away from obstacles
 - compute an attractive force toward the goal
- let the sum of the forces control the robot

To a large extent, this is computable from sensor readings

Sensor Based Calculations

Major Problem?

Local Minima!

Simulated Annealing

- Every so often add some random force

Known Map

Brushfire Transform

The Wavefront Planner: Setup

	0	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15

The Wavefront in Action

- To find the shortest path, according to your metric, simply always move toward a cell with a lower number
 - The numbers generated by the Wavefront planner are roughly proportional to their distance from the goal

Two possible shortest paths shown
